

FARM WORKSHOP: DANGEROUS SUBSTANCES AND REFUSE

PREVENTIVE MEASURES

- 1 Containers of dangerous substances are properly labelled (refer to SIMDUT / WHMIS).
- 2 Flammable and combustible materials are stored away from sources of heat and sparks.
- 3 Containers of flammable and combustible materials are grounded.
- 4 Incompatible materials are stored separately.
- 5 Compressed gas tanks are stored vertically and held firmly in place.
- 6 Propane gas tanks are stored in a cage located outside.

INDIVIDUAL PROTECTIVE EQUIPMENT TO BE USED, DEPENDING ON THE JOB!

Use the preventive measures that are made available to you!
Ensure that the preventive measures remain in place and are functional!

For more information,
see reverse side.

PRINCIPAL METHODS OF PREVENTION

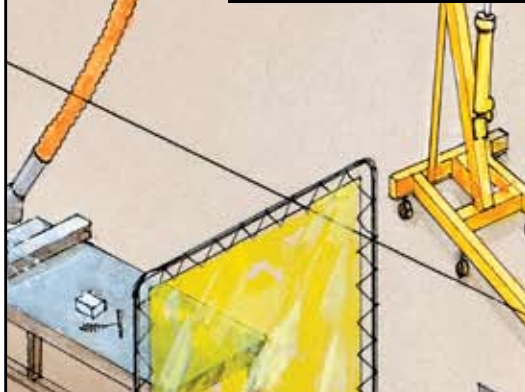

USED IN A SAFE WORKSHOP

THE WORK STATION

- Workers have received training and are aware of the Système d'information sur les matières dangereuses utilisées au travail (SIMDUT) / Workplace Hazardous Materials Information System (WHMIS).
- Material safety data sheets are available for the various products being used in the workshop.
- Absorbent litter material is available in sufficient quantities.
- The least dangerous product is used when there is a choice between several.
- The work areas and storage rooms are properly ventilated to evacuate any contaminants.
- The storage room collection and evacuation system is explosion- and fire- proof.
- The evacuated contaminants are not reintroduced through the building's air inlets.

STORAGE OF DANGEROUS SUBSTANCES

- The materials are in their original labelled containers that comply with SIMDUT / WHMIS.
- The unused compressed gas tanks are kept away from heat sources and sparks.
- The oxygen tanks are stored at least 6 meters from any flammable or combustible products (e.g. acetylene).

MANAGING HAZARDOUS REFUSE

- Refuse containers are:
 - Clearly labelled to show the type of refuse to be received;
 - Well adapted to the type of refuse they are to receive;
 - Kept away from sources of heat, sparks and flammable or combustible materials.

INDIVIDUAL PROTECTIVE EQUIPMENT (IPE)

- Workers wear:
 - Eye and face protectors adapted to the products being handled.
 - Respiratory protective equipment adapted to the products being handled.
 - Gloves and coverall or an apron adapted to the products being handled.
 - Protective footwear resistant to oils and other chemical products.

The Act respecting Occupational Health and Safety (LSST) and the Regulation respecting Occupational Health and Safety (RSST) contain clauses on employee training, storage and handling of dangerous substances (controlled products).

Warning : Preventive methods other than those presented in this poster may be required. Periodically refer to the most recent versions of the laws, regulations and norms in effect.
